

Product Comparison between KwixSeal and two part self-leveling polyurethane

Kwixseal characteristics:

Fast setup time 5 minutes

Apply any time of day or night during typical 9-5 work hours

Foot / Auto traffic not affected

Small work footprint 8 to 10 feet

Minimal Waste

No Mixing

Minimal training required

Site prep same / similar

300-400 LF joints in one tank

Repairable - simply re-heat area

Colors: multiple available

When you leave the job it will look exactly the same way next time you come back. No worries about rain, traffic, animals, etc.

Two part self leveling mastic characteristics:

Absolutely no foot / auto traffic

Setup caution tape and barricades

Breakdown caution tape and barricades

Long setup time 12 hours to 24 hours

Requires workers to work nights, weekends, holidays, etc.

Requires constant refilling of caulk guns every 10 to 15 ft

High level of skill required

Mix 2 part (A&B) then add colorant

High product waste potential (mix by the bucket)

Equipment / tool cleaning; caulk gun, etc.

When you leave the job you hope nothing messes up your work. Everything from wind, rain, insects, animals, traffic will disturb the material requiring re-doing affected areas.
